The

sequence

represents

an

oligonucleotide

used ç

construct

describes a non-human transgenic mammal comprising a genome containing a single copy of a wild-type WFS1 gene (see ABA97708) and a modified WFS1 allele containing a mutation that disrupts the function of wolframin, or its transgenic progeny. Wolframin is a predicted transmembrane protein expressed in many tissues including pancreas and brain. The transgenic nonhuman animals are useful as models for depression, particularly as

models for depression in humans.

neurochemical and

behavioural changes The animals exhibit chronic

The plant PHGPx, its analogues, and plant enzymes having PHGPx activity are useful for manufacturing an antioxidant cosmetic or pharmaceutical dermatological composition for preventing lipid and phospholipid modification due to their peroxidation, which may lead to damage of skin cells, ageing and/or necrosis. These may also be used to protect phospholipids used in cosmetic compositions against phospholipid

The transgenic animals can be used to establish a non-human model for diseases involving H2-M equivalents such as HLA-DM in humans. They can be used to identity agents for use in the treatment of e.g. inflammatory disease, graft rejection,
                                                                                                                                                                                                                                                                                                                                                                                                                                               New transgenic animals which lack functional H2-M gene - used to develop agents for treating e.g. inflammation, graft rejection, autoimmune disease or cancer \,
                                                                                                                                                                                                                                                                                                                                                                                                             Example 3; Page 8; 21pp; English.

The transgenic animals are also useful for screening identifying antidepressant agents, drugs or genes that may be emptameliorate or treat depression. The animals are also useful for monitoring the efficacy of a drug against depression.

(I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid (ABQ00010-ABQ13409) to a target nucleic acid to form a modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid, which further comprises detecting the presence of the modified target nucleic acid.

                                                                                                                                                                                                                                                                                                                                                                                      AAF32217
                                                                                                                                                                                                                                                     RESULT 34
                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence for PCR primer R51 is used with PCR primer F51 (AASO1071) to amplify a 1799 bp DNA fragment from the 5'end of the CC transgene that is integrated into the vitronectin site through homologous DNA recombination. The PTKLR-Vn/VEGF targeting vector is an example of novel targeting constructs and methods of using them for creating transgenic animals in which at least 1 single-copy, non-essential gene is creplaced with a reporter expression cassette (e.g. a luciferase gene CL linked to a promoter heterologous to the single-copy, non-essential gene CC yitronectin (Vn), fosB and galactin 3. The promoter element may be selected from VEGF, VEGFR and Tie2. The constructs may contain a cetyltransferase and thymidine kinase. The constructs are useful for creating transgenic animals in which at least 1 single-copy, non-essential gene is replaced with a reporter expression cassette.
                                                                                                                                                                                                                                                                                                                                      Best Loc

                                                                                                                                                                                                                                                                                                                                                             AAF62210;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes hydrocephaly model animals which are non-human mammals obtained through ontogenesis of a totipotent cell and their offspring, which are characterised by having the Musashi 1 and their offspring, which are characterised by having the Musashi 1 studying the cause, diagnosis and development of drugs for congenital and difficult-to-treat hydrocephaly. With such animals are useful in and surgical procedures for hydrocephaly treatment can be obtained. AAF32214 to AAF32217 represent PCR primers for Musashi 1 which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                         21-MAY-2001

                                                                                                                                                                                 The present invention relates to a method for determining the presence consolers in a host, involving the use of neoplastic molecular markers in a host, involving the use of neoplastic the array of respectfic reagents to detect such markers and analysing disease present. This can be used to determine the best treatment for cancers, in particular neural cell, lung and prostate tumours. The present sequence is a PCR primer useful for detecting the coding sequences of markers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (alpha-TTP) knockout animal. The non-human mammal is useful as a tool for determining the onset mechanisms of diseases which are based on oxidation stress, e.g. inborn vitamin E deficiency, arteriosclerosis and diabetes. The present sequence represents a PCR primer specific for PKG.

                                                                                                                                                                                                                                                                                                                                                      AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effocts from pharmaceutical for the differential efficacious responses to and side

which involves the topical administration of an essentially adenosin free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide specific for the human II4 receptor. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction patients with hyper-reactive airways.
                        acute asthma; allergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; car colon cancer; breast cancer; lung cancer; pancreatic cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes antisense oligonucleotides (AAX52869-X55271) CC directed against at least 2 mRNAs selected from target genes, coding and con-coding regions of RNAs corresponding to target genes, gene coding and conding regions, intron-exon borders, the cc initiation codons, genomic flanking regions, intron-exon borders, the cc frequency of the juxta-section between coding and non-coding cc regions and all segments of RNAs encoding proteins associated with one cc or more diseases, conditions or mixtures. The antisense oligonucleotides cmay be derived from sequences AAX5572-74. These multiple target conditions or mixtures and conditions. Typical diseases and conditions are those associated with impaired respiration and conditions are those associated with impaired respiration and configuration, including lung diseases, pulmonary vasoconstriction, for inflammation, including lung diseases, pulmonary vasoconstriction, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, constructive pulmonary vasoconstriction, emphysema, chronic constructive pulmonary diseases (COPD), and cancers such as leukemias, cr jumphomas, carcinomas e.g. colon cancer, breast cancer, melanoma, con heave metastasses, as well as all types of cancers which may metastasize cc or have metastasized to the lungs, including breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Ma

Crimunosine invention describes low adenosine (A) content antisense coligonucleotides and compositions (I) comprising them. In the antisense coligonucleotides the A is replaced by a 'Universal' or alterinative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, communosuppressive, antiasthmatic, hypotensive and cytostatic activities. Crimunosuppressive, antiasthmatic, hypotensive and cytostatic activities. Crimunosuppressive, antiasthmatic, hypotensive and cytostatic activities. Crimunoslobulins and ractivity of target polypeptides associated with colimunoslobulins and antibodies, antibody receptors, such as stimulating and communoslobulins and antibodies, antibody receptors, cytokines and communoslobulins and peripheral nervous and non-nervous system peride commonity system (CNS) and peripheral nervous and non-nervous system peride contrast community and peripheral nervous and non-nervous system peride contrast period community community and peripheral nervous and non-nervous system peride contrastistance oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction condition selected from pulmonary vasoconstriction, inflammation, allergy(les) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, comply sensor, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide construction of the present human polynucleotide construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis; cancer; ss.

Patent No. 5706388

GENERAL INFORMATION:

APPLICANT: COUTLUTE, Larry

APPLICANT: MCSW-19gen, James

APPLICANT: Biggaler, Charles

APPLICANT: Pape, Michael

TITLE OF INVENTION: METHOD AND REAGENT FOR

TITLE OF INVENTION: PROGRESSION AND REGRESSION

TITLE OF INVENTION: PROGRESSION AND REGRESSION

TITLE OF INVENTION: OF VASCULAR DISEASES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMPUTER READABLE FORM:

MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
MEDIUM TYPE: storage

COMPUTER: IBM COMPACTAGE

COMPATING SYSTEM: IBM P.C. DOS 5.0
SOFTWARE: WOR'D PERFECT 5.1

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/363,240A
FILING DATE: December 23, 1994
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 32,327
REFERENCE/AGENT INFORMATION:
NAME: WALTOURY RICHARD
REGISTRATION NUMBER: 32,327
REFERENCE/DOCKET NUMBER: 210/096
TELEZX: 67-3510
TELEZX: 67-3510
INFORMATION FOR SEQ ID NO: 1184:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid
                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-08-363-240A-1184

SEQUENCE CHARACTERISTICS:

LENGTH: 32 base pairs

TYPE: nucleic acid

STRANDEDNESS: single

TOPOLOGY: linear

MOLECULE TYPE: DNA

FEATURE:

NAME/KEY: -

LOCATION: 1.32

OTHER INFORMATION: /note
